

Firmware release notes (Elvi & BLG4)

FW version G4P0425B0425v0

Document version & date: v1.0 | 26/4/2024

Introduction

This document describes the firmware release G4P0425B0425v0 intended for use on all EVBox Elvi and EVBox BusinessLine G4 charging stations.

Development Changes

The following changes have been introduced since the G4P0424B0424v0 public release:

Connection stability improvements

- Fixed the issue where the station, under certain conditions, was not connecting back to CSMS after websocket proxy restart
- Station will perform a self-reboot after remaining disconnected from the CSMS for more than 60 minutes, to self-recover from prolonged disconnections that could be potentially caused by any internal or external factor

Hardware Compatibility

This firmware release is compatible with the following EVBox charging stations:

- **EVBox Elvi (all hardware versions)**
- **EVBox BusinessLine G4 (all hardware versions)**

Note: This release shall not be used for EVBox Iqon, or EVBox G2 or G3 charging stations.

Availability

This release is available for over-the-air update as a combined ChargePoint & ChargeBox package G4P0425B0425v0.evb.

Questions

In case of questions, please reach out to your EVBox representative.

On behalf of the Systems Engineering Team,

Dimitris Kaikas
System Architect
